***SALE ENDS MAY 31, 2019 *WHILE SUPPLIES LAST**

Baby Blue® is a unique seedling strain of Colorado Spruce. The plant is grown from seed and harvested at a specific spruce orchard in Ontario, Canada. It has three significant characteristics that set it apart from other varieties.

1. Exhibits a uniform bright blue color.
2. The plant maintains a tight, compact growth habit due to heavy bud formation on the leader.
3. The needles radiate evenly, giving the branches a very full appearance.
